ABSTRACT

[0034] A method to separately assign and modify multiple attributes of information and structure to an individual block or to a larger unitary whole comprised of multiple blocks is disclosed. A number of block instances of a block is determined. Each block instance is associated with one or more structure attributes. A number of data elements is determined. Each data element is associated with one or more information attributes. The data elements are mapped to the block instances. The mapped block instances are displayed contiguously.
